

Dear Colleague,

We are pleased to announce the second annual **Recreational Water Illness Prevention Week, May 22-29, 2006**. The week before Memorial Day Weekend, the start of the traditional summer swimming season, has been designated as an official event to bring attention to the important role that we all play in promoting Healthy Swimming practices. Many of you read about the splashpad-associated outbreak of "Crypto" (cryptosporidiosis) that affected almost 3000 people in Seneca Lake, NY last summer. That was just one of many outbreaks of recreational water illnesses that occurred across the country last year. These outbreaks underscore the continuing need to educate people about recreational water illness prevention. Recreational Water Illness Prevention Week provides an ideal opportunity to reach out to pool operators, the media, and the general public with messages designed to raise awareness and stimulate action. More information about this special week is available at:

[http://www.cdc.gov/healthyswimming/rwi\\_prevention\\_week.htm](http://www.cdc.gov/healthyswimming/rwi_prevention_week.htm)

*Please forward this message to all your aquatic health program staff so they can be a part of this major Healthy Swimming Initiative. Attached are two files that may provide ideas and actions that our many state, local, and partner programs can use to capitalize on the national publicity planned for this week with their own local version of this event. Please share your successes with us. Send a recap of your activities (clippings, radio and television coverage, photographs, website links and other materials) promoting Healthy Swimming to-*

**Via email:**
